PLAN

A-A

BENT BAR DETAILS

NOTES:

The estimated material quantities shown are for information purposes only. Include the concrete, reinforcing bars, polyethylene film, preformed joint filler, polystyrene, silicone sealant, foundation fill, connection plates and pipes, and labor required to build the approach slabs, curbs and barriers in the pay item "Bridge Approach Slab-Remove and Replace." Include the dowel bars in the concrete pavement pay item. Use Class AE-3 concrete and Grade 60 reinforcing steel. Provide reinforcing steel that meets the requirements of Section 612. Use polyethylene film that meets the requirements of ASTM C171.

The bar marks beginning with an "X" indicate an epoxy coated bar. The dimensions shown in the "Bent Bar Details" are out to out.

Install 5XA903 bars according to manufacturer's recommendations, with a high strength adhesive specifically intended for concrete anchorage (16k min. ultimate pullout), and that meets the requirements of Section 806.02. Provide a minimum anchorage length of 1 foot.

SKEW ANGLE = 30°

NOTES

100 SCOPE OF WORK: Sandblast, clean, and paint all exposed structural steel at the three locations.

630 SANDBLASTING AND PAINTING: Sandblast, clean, and paint all structural steel surfaces, including the bearing plates, according to Special Provision 1065(14). Paint the finish coat in the colors as shown in the table below, which must meet Aerospace Material Specification Standard 595. Lump Sum will be paid for the total area of 34,675 SF as noted in accordance with Special Provision 1065(14).

Submit to the Engineer 3” x 5” FED-STD-595C color chip cards for color numbers 21136 and 24108 with a declaration of conformity.

630 CONTAINMENT SYSTEM: Use a containment system that meets Special Provision 1065(14).

930	8644	SILICONE SEALANT	LF	88
930	9612	SPALL REPAIR	SF	330

930 SILICONE SEALANT: The silicone sealant and backer rod shall be replaced in the joints between the approach slabs and deck at both ends of the bridge. The new silicone sealant and backer rod shall extend 15 inches up the faces of the barriers. After removing the existing silicone sealant and backer rod, the joint shall be cleaned of all foreign material and sandblasted before the new backer rod and silicone sealant are installed. A low modulus (Type 5) silicone sealant shall be used. The backer rod diameter may need to be larger if the existing joint is greater than the 1" as shown. All materials, labor and equipment required to remove and replace the backer rod and silicone sealant shall be included in the bid item "Silicone Sealant."

930 SPALL REPAIR: The spall repair will be constructed like a Bridge Deck Overlay and shall be constructed according to Section 650 of the NDDOT Specifications. The minimum depth of removal shall be 2". The perimeter of the repair shall be saw cut to a depth of 1". The saw cutting shall be incidental to the price bid for "Spall Repair."

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	IM-5-094(018)059	190

NOTES - EAST DICKINSON INTERCHANGE

100 SCOPE OF WORK: Work at this site consists of widening the existing structure to the northwest by adding one girder line and replacing the curb on the other side. The clear roadway width will be widened from 30'-0" to 36'-0". Also, work at this site consists of installing approach slabs at each end of the bridge.

100 GENERAL: The cost of furnishing and placing preformed expansion joint filler, concrete inserts, tie wire, bar spacers, bar supports, and other miscellaneous items shall be included in the price bid for Class AE-3 and AAE-3 concrete.

105 The existing structural steel is painted with lead-based paint. Certain contractor operations could expose employees to hazardous levels of lead. The contractor shall plan accordingly and shall inform employees of the hazards of lead-based paint.

202 REMOVAL OF CONCRETE: The contractor shall remove the concrete in a manner that prevents any damage to the remaining structure. All concrete removed shall become the property of the contractor and shall be disposed of properly off of the right of way. The work needed for superstructure, abutment, and pier cap removal shall be included in the lump sum bid item "Removal of Concrete - Site 3." There are approximately 110 cubic yards of concrete to be removed. There is a double box beam rail retrofit mounted on the existing concrete curbs and railings. The rail retrofit shall be removed and disposed of properly off of the right of way. The work needed to remove the rail retrofit shall be included in the lump sum bid item "Removal of Concrete - Site 3."

210 EXCAVATION: The excavation at the abutments, as shown, and the excavation required to build the piers shall be included in the lump sum bid item, "Class 1 Excavation."

210 SELECT BACKFILL: Select backfill shall meet the requirements of Section 816.03, Class 3. The backfill shall be placed in layers of not more than 6 inches, moistened or dried as required, and thoroughly compacted with mechanical tamping equipment.

550 BRIDGE APPROACH SLABS: Mechanical finishing of the approach slabs shall be required. A mechanical or hand-held transverse metal tine finish shall be applied. Tining shall start 6" from the beginning and end of the approach slabs. A surface tolerance of 3/16" in 10 feet is also required.

602 SURFACE FINISH "D": Surface Finish "D" shall be required for the inside and top surfaces of the barrier.

602 DECK CONCRETE: Beams and girders have slight variations in the anticipated camber. To build the deck to the designated thickness will require slight adjustments in deck elevation and/or riser dimensions. These adjustments result in minor concrete quantity discrepancies. The contractor shall consider this quantity discrepancy when he bids the unit price for Class AAE-3 Concrete. The Department will pay plan quantity of Class AAE-3 Concrete.

602 Deflection of the deck shoring shall be computed using the total dead load plus the weight of the finishing machine. The forming shall be adjusted properly to accommodate the deflection and thereby maintain the total slab thickness specified in the plans.

602 PENETRATING WATER REPELLENT TREATMENT: Penetrating water repellent shall be applied to the driving surface of the new concrete deck.

602 BARRIERS: Barriers shall be constructed according to the provisions of Section 602.03 B.4 except that there shall be no expansion or deflection joints. Make 3/4" V-grooves in all faces of the barriers at each pier and at equal spaces between substructures at approximately 10-foot spacing.

602 DECK TINING: Tining shall begin 6 inches from the beginning and the end of the deck and 6 inches from each deck joint.

SHOP DRAWINGS: The contractor shall submit the following shop drawings to the Construction office for approval:

1. Structural steel.

DESIGN STRENGTH:

F'C	3,000 PSI	Cl. AE-3 Concrete
F'C	4,000 PSI	Cl. AAE-3 Concrete
FY	60,000 PSI	GR. 60 Reinforcing Steel
FY	36,000 PSI	Structural Steel M270 Grade 36

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	IM-5-094(018)059	191

NOTES - EAST DICKINSON INTERCHANGE

616 STRUCTURAL STEEL: Structural steel shall be AASHTO M 270, Grade 36T2, except the requirement for Charpy V-Notch test is waived for the bearings, diaphragms, and diaphragm connection material.

616 Shear connectors on splice plates shall be moved to clear bolt holes.

616 Field connections shall be made with 7/8 inch diameter, AASHTO M 164 high-strength bolts unless otherwise shown.

616 Temporary or permanent attachments or devices that are not shown on the plans as part of the structure shall not be welded to the structural steel members during the fabrication and construction process.

616 The cost of swedge bolts shall be included in the total cost of structural steel.

630 PAINT AND PAINTING: The structural steel shall be painted according to the specifications. The finish coats shall be aluminum, color number 37200, and shall meet Federal Standard No. 595B colors.

930 ROADWAY CANOPY: The contractor shall construct a canopy above the traveled roadway under the structure to protect traffic from falling material. The canopy is an added safeguard and does not relieve the contractor of any responsibility for the safety of the public.

The canopy must be erected before the concrete deck is removed and remain in place until after the new deck is complete. The canopy may be supported from the ground or suspended from the girders. The erection of the canopy shall be completed in a minimum amount of time and with the least inconvenience to the public.

The canopy shall be of a design and material selected by the contractor and approved by the engineer. The minimum vertical clearance from the traveled roadway to the bottom of the canopy shall be 15'-0". The canopy shall project a minimum distance of 5'-0" beyond the outside edge of slab of the proposed structure.

The canopy shall project a minimum distance of 5'-0" beyond the edge of the driving lanes beneath the structure.

After completion of the structure, the canopy shall be removed and shall remain the property of the contractor.

The roadway canopy shall be paid for at the contract lump sum unit price for "Roadway Canopy - Site 3." The roadway canopy shall be measured as a lump sum item and shall include construction, maintenance, and removal.

930 NOSING CONCRETE: The nosing concrete material shall be an elastomeric concrete or a polymeric concrete that will provide a durable edge that can withstand live-load traffic without chipping or spalling. The nosing concrete material shall be Silspec 900 PNS, manufactured by Silicone Specialities Inc.; Wabocrete II, manufactured by Watson Bowman Acme; Elastomeric Concrete, manufactured by D. S. Brown Company, or an approved equal. The nosing concrete shall be mixed and installed according to the manufacturer's recommendations. All labor and materials required to install the nosing concrete shall be included in the bid item "Nosing Concrete."

930 SILICONE SEALANT: The silicone sealant shall be a rapid cure, self-leveling, cold-applied two component silicone sealant that will bond to and be compatible to the nosing concrete used. The sealant shall be installed according to the manufacturer's recommendations. The silicone sealant and the nosing concrete must be supplied by the same manufacturer as a complete system. The backer rod and any necessary bonding material shall be included in the bid item "Silicone Sealant."

930 TECHNICAL ASSISTANCE: The contractor shall acquire technical assistance from the manufacturer of the nosing concrete and silicone sealant for the surface preparation and installation of the nosing concrete and the silicone sealant. A technical representative must be present for the start of surface preparation and installation for at least one day. The contractor shall contact the manufacturer at least two weeks prior to the installation. The technical assistance shall be provided at no additional cost to the department.

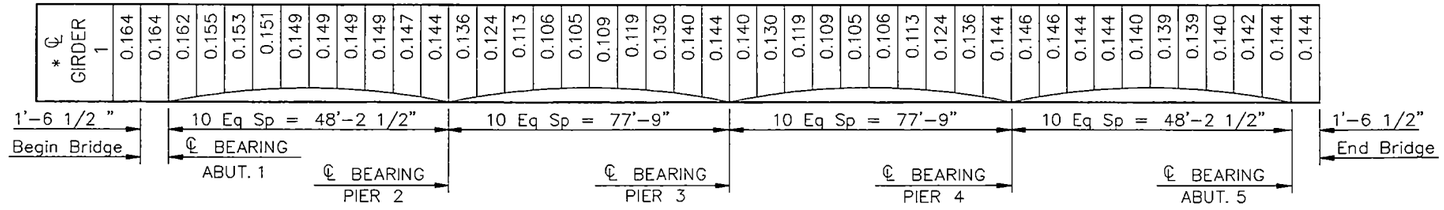
SHOP BLOCKING DIAGRAM-NEW GIRDER 1

DIMENSIONS					
GIRDER NO.	A	B	C	D	E
1	10'-0"	10'-5 9/16"	10'-7 15/16"	10'-9 5/16"	10'- 8 3/4"



* Girder No. 1 is the New Girder

SCREED ELEVATIONS

NOTE:
The dimensions shown above include the effects of deck cross slope, bridge skew and dead load deflections. The screed elevations shall be calculated by taking elevations along the existing deck, directly above girder 2 (existing exterior) at tenth points prior to any deck removal, then subtract the dimensions listed above from the tenth point elevations for girder 2. The screed elevations calculated are for the tenth point locations on the new girder.

NOTE:

The dimensions for the rodent screen are approximate to allow for bending and a snug fit into the slot in the headwall.

The rodent screen shall be fabricated from flattened, expanded metal with screen openings of approximately 0.25 square inches. The screen shall be 16 Ga. metal and be hot dip galvanized after fabrication.

The Size 4 Coarse Aggregate, Select Backfill, Geotextile Fabric (Type D2), the 2" Polystyrene Insulation Board, the 4" Perforated PVC Pipe, the 4" Non-Perforated PVC Pipe, the Precast Concrete Headwall, the Rodent Screen, Class 1 Excavation, equipment and labor required to place the Abutment Underdrain shall be included in the pay item "Concrete Bridge Approach Slab".

The Class 1 excavation needed for the abutment and pier widening shall be included in the pay item "Class 1 Excavation".

APPROACH SLAB – BRIDGE DECK JOINT

STAGE 1:

1. Remove concrete at ends of the existing deck to allow for nosing concrete.
2. Place the 1" thick preformed expansion joint filler, the 1/2" x 4" preformed expansion joint filler, the 1" polystyrene and the polyethylene membrane.

STAGE 2:

3. Place the new approach slab concrete. A 2" x 3 1/2" blockout shall be formed between the curbs in the approach slab as shown.

STAGE 3:

4. Place nosing concrete in the blockout areas, both in the deck and in the approach slab.
5. Remove the 1" polystyrene.
6. After the nosing concrete has cured, grind the 1/4" beveled edges smooth and prepare the joint, apply any necessary bonding material, install the backer rod and the silicone sealant.

NOTES:

All estimated material quantities shown on drawing no. 94-064.204-20 are for informational purposes only. All materials including concrete, reinforcing bars, polyethylene membrane, preformed joint filler and labor required to build the approach slab, barriers and curbs shall be included in the pay item "Concrete Bridge Approach Slab".

The concrete shall be Class AE-3 and the reinforcing steel shall be Grade 60. The polyethylene membrane shall meet the requirements of AASHTO M171.

Surface Finish "D" shall be required for all surfaces of the curb transitions.

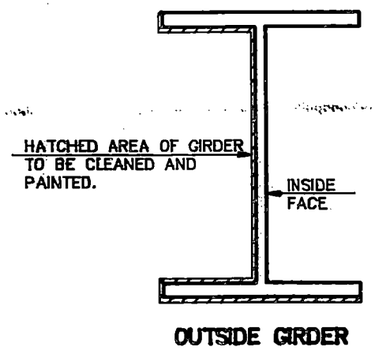
GENERAL NOTES



OUTSIDE GIRDER

SCOPE OF WORK: THIS PROJECT CONSISTS OF CLEANING AND PAINTING THE FACIA SURFACES OF EXTERIOR GIRDERS AND MISCELLANEOUS SPOT COATING OF DETERIORATED AREAS OF ALL REMAINING PAINTED SURFACES AS DESIG-NATED BY THE ENGINEER AT THE TEN (10) BRIDGE SITES LISTED ABOVE.

PAINTING: THE FACIA SURFACES OF STRUCTURAL STEEL SHALL BE CLEANED AND PAINTED ACCORDING TO THE SUPPLEMENTAL SPECIFICATIONS, EXCEPT FOR SECTION 630.03 D.3. REHABILITATION PAINTING, WHICH SHALL BE REVISED AS FOLLOWS: THE SURFACE OF THE EXTERIOR BEAMS SHALL BE PREPARED BY BLAST CLEANING. THE LEVEL OF PREPARATION SHALL MEET THE REQUIRE-MENTS OF SSPC-SP 7 "BRUSH-OFF BLAST CLEANING".
FOR FIVE (5) STRUCTURES THE FINISH COAT SHALL BE BLUE COLOR NUMBER 25240 AND FOR EAST MIDWAY SEPARATION THE FINISH COAT SHALL BE GREEN COLOR NUMBER 24227 OF THE FEDERAL STANDARD 595B. FOR FOUR (4) STRUCT-URES THE FINISH COAT SHALL BE ALUMINUM. THE ALUMINUM FILLED EPOXY MASTIC PRIMER SHALL BE TINTED TO DIFFERENTIATE THE COLOR FROM THE FINISH COAT. PREPARATION OF THE SPOT COAT AREAS SHALL MEET THE REQUIRE-MENTS OF SSPC-SP 3 "POWER TOOL CLEANING". PAYMENT FOR "SANDBLASTING AND PAINTING" AND "PREPARATION AND SPOT COATING" WILL BE FULL COMPEN-SATION FOR ALL LABOR, EQUIPMENT AND MATERIALS NECESSARY TO COMPLETE THE WORK AS SPECIFIED.

TRAFFIC CONTROL: TRAFFIC SHALL BE CONTROLLED AS SHOWN ON STANDARD D-754-11, TYPE P FOR ALL OF THE SITES EXCEPT THE STRUCTURES OVER THE HEART RIVER. TRAFFIC CONTROL FOR THE HEART RIVER STRUCTURES SHALL BE CONTROLLED AS SHOWN ON STANDARD D-754-7, TYPE F.
ONE LANE OF THE ROADWAY SHALL BE CLOSED ONLY DURING DAYLIGHT HOURS. THE EQUIPMENT AND CONTROL DEVICES SHALL BE REMOVED FROM THE ROADWAY AND REGULAR TRAFFIC RESTORED AT THE END OF EACH WORK DAY. EQUIPMENT THAT MAY BE HAZARDOUS TO ERRANT VEHICLES LEAVING THE ROADWAY WILL HAVE TO BE PARKED BEYOND 50 FEET MEASURED FROM THE EDGE OF THE DRIVING LANE. CONTROL DEVICES SHALL BE PLACED IN LOCATIONS SO THAT MOTORISTS WILL NOT MISTAKE THEM AS REQUIRING THE MOTORIST TO MAKE A MANUEVER. THE CONTRACTOR SHALL NOTIFY THE DISTRICT ENGINEER ONE WEEK PRIOR TO THE START OF THE WORK.

RESPONSIBILITY TO THE PUBLIC: THE CONTRACTOR SHALL SHROUD THE WORK AREA TO PROTECT THE MOTORING PUBLIC. SHROUDING SHALL BE CAPABLE OF PREVENTING DUST AND PAINT OVERSPRAY FROM REACHING PASSING TRAFFIC AND CAUSING VEHICLE DAMAGE OR IMPAIRING MOTORIST VISIBILITY.
THE COST OF MAINTAINING AND PROTECTING TRAFFIC WILL BE CONSIDERED INCIDENTAL TO THE PRICE BID FOR "TRAFFIC CONTROL".

NOTES:

1. THE BID ITEM SHALL BE "DOUBLE BEAM RAILING RETROFIT". THE PAY LENGTH SHALL BE END TO END AND SHALL BE IN LINEAL FEET.
2. THE RAILING, POSTS AND POST SUPPORTS SHALL CONFORM TO ASTM A500, COLD-FORMED WELDED AND SEAMLESS CARBON STEEL STRUCTURAL TUBING IN ROUNDS AND SHAPES, GRADE B. THE POST TOPS, POST BASE, SUPPORT BASE, SHIMS AND ANCHORAGE PLATES SHALL CONFORM TO ASTM A36 STRUCTURAL STEEL.
3. THE ANCHOR BOLTS MUST BE ABLE TO DEVELOP IN TENSION THE EQUIVALENT OF A ¾" ø A325 BOLT. THE ANCHOR BOLTS MAY BE MECHANICAL TYPE, GROUT-IN TYPE OR OTHER TYPE THAT CAN DEVELOP THE REQUIRED TENSION IN THE EXISTING CONCRETE.
4. THE TRAFFIC FACE OF THE POST SHALL BE INSTALLED VERTICAL. THE POSTS SHALL BE PERPENDICULAR TO THE TOP OF THE CURB IN THE OTHER DIRECTION. STEEL POST SHIMS MAY BE USED UNDER POSTS WHERE REQUIRED FOR PROPER ALIGNMENT.
5. RAILS SHALL BE FABRICATED SO THAT EACH RAIL IS ATTACHED TO A MINIMUM OF 2 POSTS AND A MAXIMUM OF 4 POSTS
6. THE BOX BEAM RAILING RETROFIT SHALL BE FABRICATED AND GALVANIZED ACCORDING TO SECTION 850-6 OF THE STANDARD SPECIFICATIONS.
7. THE SPLICE JOINT CAP SHALL ALWAYS BE ½". THE EXPANSION JOINT CAP SHALL BE 2" UNLESS OTHERWISE SHOWN ON THE BRIDGE PLANS.

NOTES:

GENERAL:

The cost of furnishing and placing joint filler, asphalt curb seal, name plates, end-post pipe sleeves and other miscellaneous items shall be included in the price bid for Class AE-2 Concrete.

Welding will not be paid for directly but shall be included in the unit price bid for Structural Steel.

Dead load deflections and vertical curve corrections have been accounted for in the riser diagram on Sheet H-1179-2.

EMBANKMENT:

Earth consolidations shall be in accordance with Section 17.3(a)4 of the Stanard Specifications using "Standard Compaction".

Roadway Excavation under the structure down to elevation 2438.0 is the responsibility of the Structural Contractor and shall be removed before the deck beams are placed. This material, if suitable, shall be used in the Structural Contractors Embankment at both ends of the structure.

Additional embankment material, if required, shall be obtained from the Highway Right-of-Way as staked by the Engineer.

The pit run gravel subbase shall not be placed above the berm until the superstructure deck has been placed.

EXCAVATION:

Excavation Class 2 at the abutments shall extend from the bottom of the footing to the finished profile of the Structural Contractors Embankment.

Excavation at the abutments shall not be removed until the Structural Contractors Embankment has been placed.

Excavation Class 3 shall include that excavation between the datum elevation 2424.0 and the bottom of each bent footing as shown on this sheet. Pay limits of structural excavation shall be one foot outside of the bent footings as shown on plans.

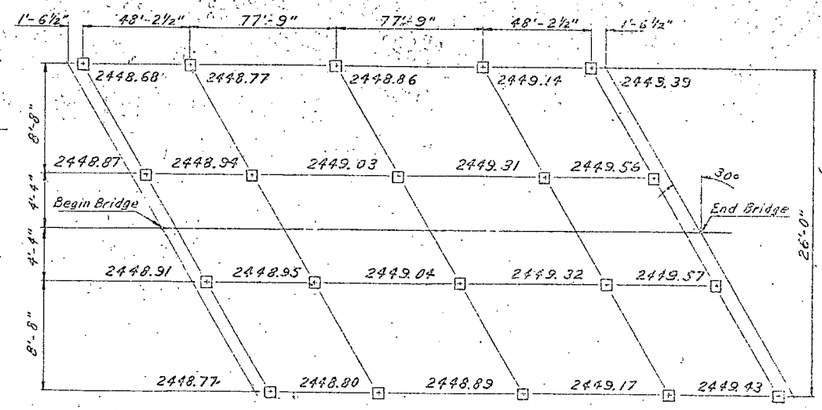
Remove top soil at abutments before placing embankment.

Excavation Class 2 at the bents shall extend upward from the datum elevation 2424.0 to elevation 2438.0 or lower, depending on how much roadway excavation the Structural Contractor removes, or to the finished roadway profile below the bridge if the Grading Contractor removes the roadway excavation first.

REINFORCING STEEL: (Intermediate Grade)

Dimensions for bent bars are given center to center unless noted.

The following Special Provisions shall be applicable:
SP-76A, SP-88A, SP-89, SP-90 & SP-100



BEARING PLATE LAYOUT

Elevations are to top of Concrete

CONCRETE:

All exposed edges of concrete shall be beveled with 3/4" triangular molding, unless otherwise noted.

The "Rubbed Surface Finish" will be required for the roadway and outside faces of curbs, edges of slab, all faces of rails, intermediate and end posts, the exposed faces of the abutment wing wall, and all exposed surfaces of bents. All other surfaces shall be given the "Ordinary Surface Finish".

All concrete shall be Class AE-2, except railings which are Class AAE-4, and shall be compacted by vibration.

The deck slab concrete shall be struck off and compacted by an approved bridge deck finishing machine.

SHORING:

The Contractor will be allowed to use manufactured shoring in forming the concrete slab except over the cover plates at the bents and over the flange splice plates, with no riser adjustment required, except as provided on sheet H-1179-2.

PILING:

The Boring Logs indicate a hard coal layer just below the footing elevation of Bents 3 and 4. The Structural Contractor will be required to remove this coal layer sufficiently by trenching, drilling or a combination of both to allow driving the treated timber piling in the clay soil below. No extra compensation will be allowed for work required to remove the coal as required above. The removal of the necessary coal to allow driving of piles into the clay below shall be incidental to the pay item "Treated Timber Piling".

BEAM ELEVATION

NOTES:

The Details shown are for a 4 Span Continuous I-Beam and represent beam No. 1, in a four beam bridge. The bridge has an overall Length of 255'-0" and is skewed 30°-00' Left. See Drawing H-1179-2.

Beams No. 2, No. 3, & No. 4 although similar to Beam No. 1 are to be fabricated in accordance with these details and as further amplified on Drawing H-1179-2.

Spacing of shear connectors is symmetrical about centerline of Bent Brg. No. 3.

SCALE:
Vertical - 3/4" = 1'-0"
Horizontal - 1/8" = 1'-0"

Designed for 25 #/sq. ft. F.W.S.

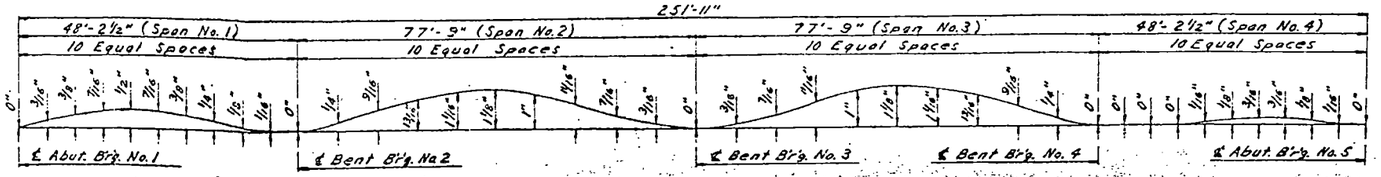
ABUTMENT B'R'GS. NO. 1&5



FIELD RISER DIAGRAM

Showing Dimension "a"

NOTES:

GENERAL:

All rivets are to be ⅞".
Open holes are to be 15/16" except as noted.
Shop connections shall be made as shown.

Field connections shall be made with high tensile strength bolts or shall be riveted.

Bearing areas are to be finished true to plan and elevation by grinding if necessary, before bearing plates are set.

PAINT:

Paint and painting shall conform to the North Dakota Standard Specifications for Road and Bridge Construction, Sections 80 & 132.17. All exposed steel surfaces shall be given one shop coat of red lead paint (including top of upper beam flange), one spot coat of red lead paint after erection and concrete work is completed and two field coats of aluminum paint (first field coat tinted with Prussian Blue).

No paint allowed on shear connectors.

RISER DIAGRAM:

The riser diagram represents the rise in inches above assumed chords drawn between supports that are required to compensate for the dead load deflection and the vertical curve of the roadway. Additions or subtractions must be made to the riser dimensions to compensate for tolerances in the beam and deflections due to the weight of the beam.

WELDING:

The metal-arc process shall be used for all shop and field fabrication. Electrodes used in the fabrication of this bridge shall be of the E60 classification. All welding shall conform to the current "Standard Specifications for Welding Highway and Railway Bridges ~ Design, Construction, and Repair" of the American Welding Society.

Welding will not be paid for directly, but shall be included in the unit price bid for Structural Steel.

BRONZE BEARING PLATES:

The Bronze Bearing Plates shall conform to ASTM B103-55, Alloy I. Contact surfaces shall be finished in the direction of motion to ASA B46.1-47 No. 125. Lubricated surfaces shall be provided with trepanned recesses to receive a lubricating material suitable for long-life service of the bearing face. The lubricating area shall comprise not less than 25 per cent of the total area. The coefficient of friction for bronze on steel shall not exceed .10 per cent.

ALTERNATE SHEAR DEVICES:

Stud Shear Devices shall be manufactured of C-1015 cold rolled steel which conforms to ASTM Specification A-108-53T, and shall conform to the diameter and other dimensions as shown.

STRUCTURAL STEEL:

Structural carbon steel, except bearing plates and swedge bolts shall conform to the latest ASTM A-36 Specifications.

Steel Bearing Plates and swedge bolts shall conform to the latest ASTM A-7 Specifications. (Fabricator may substitute A-36 at his option)

Bronze Bearing Plates are included in quantities for A-7 Structural Steel on Sheet H-1180-1.

A-36 Structural Steel, A-7 Structural Steel and the Bronze Bearing Plates are listed in total on the layout sheet as Structural Steel and will be paid for as such.

See Drawings:
H-1179-1 for Beam Details
H-1180-1 for Slab Details and Quantities
H-1180-2 for Railing and Typical Slab Sections.

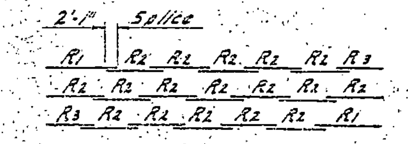
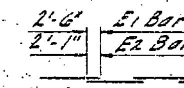
BENT BAR DETAILS



RAIL STEEL ASSEMBLY



E BAR SPLICING DETAILS

See Drawings:
H-1180-2 for Slab Details and Bar List.
H-1179-2 for Steel Details.
H-1179-1 for Beam Details.

NOTES:

The slab shall be poured in one of the following sequences:

1. In one continuous pour, (See Sec. 55.3(f) of St'd. Specs).
2. a. Slab section 1, left to right.
   b. Slab section 2, right to left.
   c. Slab section 3, right to left.
   d. Slab section 4, right to left.

T1 bars in the bar list on Sheet H-1180-2 and in the plans above are for a continuous pour method of placing concrete. If the contractor elects the multiple pour method of placing concrete, he shall order reinforcing steel to fit the four panels as shown in the plan view, and shall provide 4'-6" splice bars at the construction joints at his own expense.

Each curb shall be placed in one continuous operation.

Bevel all exposed edges with 3/4" triangular moulding except as shown.

Designed for 25#/sq. ft. F.W.S.

QUANTITIES

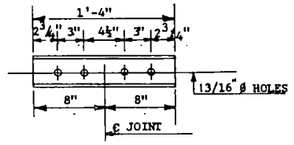
RAIL SPLICE



SPLICE SLEEVE AT SPLICE

NOTES:

1. THE BID ITEM SHALL BE "DOUBLE BEAM RAILING RETROFIT". THE PAY LENGTH SHALL BE END TO END AND SHALL BE IN LINEAL FEET.
2. THE RAILING, POSTS AND POST SUPPORTS SHALL CONFORM TO ASTM A500, COLD-FORMED WELDED AND SEAMLESS CARBON STEEL STRUCTURAL TUBING IN ROUNDS AND SHAPES, GRADE B. THE POST TOPS, POST BASE, SUPPORT BASE, SHIMS AND ANCHORAGE PLATES SHALL CONFORM TO ASTM A36 STRUCTURAL STEEL.
3. THE ANCHOR BOLTS MUST BE ABLE TO DEVELOP IN TENSION THE EQUIVALENT OF A ½" ø A325 BOLT. THE ANCHOR BOLTS MAY BE MECHANICAL TYPE, GROUT-IN TYPE OR OTHER TYPE THAT CAN DEVELOP THE REQUIRED TENSION IN THE EXISTING CONCRETE.
4. THE TRAFFIC FACE OF THE POST SHALL BE INSTALLED VERTICAL. THE POSTS SHALL BE PERPENDICULAR TO THE TOP OF THE CURB IN THE OTHER DIRECTION. STEEL POST SHIMS MAY BE USED UNDER POSTS WHERE REQUIRED FOR PROPER ALIGNMENT.
5. RAILS SHALL BE FABRICATED SO THAT EACH RAIL IS ATTACHED TO A MINIMUM OF 2 POSTS AND A MAXIMUM OF 4 POSTS
6. THE BOX BEAM RAILING RETROFIT SHALL BE FABRICATED AND GALVANIZED ACCORDING TO SECTION 850-6 OF THE STANDARD SPECIFICATIONS.
7. THE SPLICE JOINT GAP SHALL ALWAYS BE ½". THE EXPANSION JOINT GAP SHALL BE 2" UNLESS OTHERWISE SHOWN ON THE BRIDGE PLANS.

FEDERAL HIGHWAY ADMINISTRATION

APPROVED

DIVISION ENGINEER DATE

FED. ROAD DIST. NO.	STATE	PROJ. NO.	SHEET NO.	TOTAL SHEETS
8	N. D.	BR-094-(135)018	13	

NOTES

THE CONTRACTOR SHALL NOTIFY THE DISTRICT OFFICE OF THE STATE HIGHWAY DEPARTMENT WELL IN ADVANCE OF ANY WORK REQUIRED TO BE DONE BY THE STATE MAINTENANCE SO AS NOT TO INTERFERE WITH THE CONTRACTOR'S OPERATIONS.

STRUCTURAL DETAILS OF SPECIFIC STRUCTURES ARE AVAILABLE AT THE DISTRICT OFFICE OR AT THE BRIDGE DIVISION OF THE CENTRAL OFFICE IN BISMARCK.

LIMITS OF CLASS 2 AND 3 OVERLAY SHALL BE DETERMINED BY THE ENGINEER AND OUTLINED WITH SOME SUITABLE MARKING. THESE AREAS SHALL NOT BE EXPANDED UNLESS APPROVED BY THE ENGINEER.

ANY REINFORCING STEEL WHICH IS REPLACED IN THE BACK OF ABUTMENT SHALL BE PAID FOR IN ACCORDANCE WITH SECTION 109.5 OF THE ND STANDARD SPECIFICATIONS FOR ROADS AND BRIDGES. THE LAP LENGTH SHALL BE A MINIMUM OF 30 DIAMETERS. NO WELDED SPLICES WILL BE ALLOWED.

THE OVERLAY SHALL BE PLACED OVER ONE HALF OF THE BRIDGE FROM THE LONGITUDINAL CENTERLINE TO THE CURB IN ONE CONTINUOUS POUR. TRAFFIC SHALL BE MAINTAINED ON THE OTHER HALF OF THE ROADWAY.

CANOPY

SHOULD THE DEPTH OF CONCRETE REMOVAL MAKE IT POSSIBLE FOR THE CHIPPING HAMMER TO PENETRATE THE FULL DEPTH OF THE SLAB, A MEANS OF PROTECTING THE ROADWAY BENEATH THE STRUCTURE FROM FALLING DEBRIS SHALL BE PROVIDED AS DIRECTED BY THE ENGINEER.

PAYMENT FOR SUCH PROTECTION WILL BE MADE IN ACCORDANCE WITH SECTION 109.5 OF THE ND STANDARD SPECIFICATIONS FOR ROADS AND BRIDGES.

SHOULDER DAMAGE

THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING ANY DAMAGE DONE TO THE ROADWAY SHOULDERS DURING THE OVERLAY OPERATIONS.

SUB-BASE MATERIAL

THE COST OF PLACING ANY REQUIRED AGGREGATE UNDER THE REPLACED APPROACH PANELS AND THE PCC PAVEMENT PANELS, INCLUDING THAT REQUIRED TO BRING THEM TO THE PROPER GRADE, SHALL BE INCIDENTAL TO THE ITEMS REMOVE AND REPLACE APPROACH SLAB AND REMOVE AND REPLACE PCC PAVEMENT.

PANEL REMOVAL

THE THICKNESS OF THE EXISTING PCC PAVEMENT PANELS AND/OR THE APPROACH SLAB MAY VARY FROM THE ORIGINAL PLACEMENT THICKNESS DUE TO UNDJACKING WHICH HAS BEEN DONE BY MAINTENANCE FORCES ON SOME STRUCTURES. THE COST OF ANY EXTRA REMOVAL SHALL BE INCIDENTAL TO THE ITEMS REMOVE AND REPLACE PCC PAVEMENT AND REMOVE AND REPLACE APPROACH SLAB.

CLASS OF CONCRETE

THE CONCRETE MIX USED IN THE OVERLAYS SHALL BE AS SPECIFIED IN THE SPECIAL PROVISIONS. ALL OTHER CONCRETE SHALL BE EITHER CLASS AE-1 OR AE-3 AT THE OPTION OF THE CONTRACTOR.

GUARD RAIL

IF THE CONTRACTOR WISHES TO REMOVE ANY APPROACH GUARD RAIL IN CONNECTION WITH PLACING CURB AND GUTTER SECTIONS OR APPROACH TAPERS, HE SHALL DO SO FOR HIS CONVENIENCE ONLY. THE COST OF ANY SUCH REMOVAL SHALL BE AT THE CONTRACTOR'S EXPENSE, AND THE RAILING SHALL BE REPLACED TO EXISTING CONDITIONS.

HOT BITUMINOUS PAVEMENT-SPECIAL

THE ASPHALT CEMENT AND THE TACK COAT ARE NOT SEPARATE PAY ITEMS, BUT SHALL BE INCLUDED IN THE PRICE BID FOR "HOT BITUMINOUS PAVEMENT-SPECIAL". THE AGGREGATE USED FOR HOT BITUMINOUS PAVEMENT AND THE TYPE AND GRADE OF LIQUID ASPHALT FOR TACK SHALL BE APPROVED BY THE ENGINEER IN THE FIELD. THE HOT BITUMINOUS PAVEMENT MATERIAL SHALL BE HOT MIXED, BLADE LAID, COMPACTED AND MAY BE OBTAINED FROM A COMMERCIAL SOURCE. IT IS INTENDED THAT THE OPTIMUM AMOUNT OF ASPHALT CEMENT BE USED IN THE MIX, AND THE QUANTITY SHOWN UNDER THE BASIS OF ESTIMATE MAY BE ADJUSTED BY THE ENGINEER IF NECESSARY.

TWO-LANE, TWO-WAY ROADWAYS

THE MAINTENANCE AND PROTECTION OF TRAFFIC FOR TWO-LANE, TWO-WAY ROADWAYS PROVIDES FOR FLAGGING THE TRAFFIC AT ALL TIMES UNTIL ROADWAY IS COMPLETELY OPEN TO TRAFFIC. IN LIEU OF PROVIDING FLAGGING AT ALL TIMES, A TRAFFIC SIGNAL SYSTEM MAY BE PROVIDED. THE TRAFFIC SIGNAL SYSTEM SHALL BE APPROVED BY THE ENGINEER PRIOR TO THE PRE-CONSTRUCTION CONFERENCE.

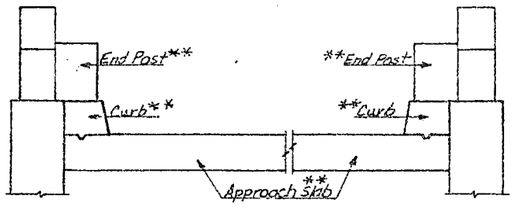
END VIEW



A–A

** Slab, curb & end posts to be removed & replaced on east end of both structures.

NOTE

All materials and labor necessary to construct the beam guard rail end posts as indicated on the drawings shall be included in the price bid for "Approach Slab (Remove and Replace)".

The existing concrete areas which will be in contact with new concrete shall be wire brushed and cleaned before any new concrete is poured.

The Highway Deaprtment shall inform the contractor as to the type of cement to be used so that the color of the new and existing concrete will be similar.

All new exposed concrete shall have a rubbed surface finish. The exposed edges shall be beveled to match existing work.
