

Memorandum

To: Jared Loegering and Colter Schwagler, NDDOT
From: Stan Vitton, Aaron Grosser, and Matt Peterson, Barr
Subject: Vibration Monitoring Plan
Date: October 11, 2023
Project: West Fargo Main Ave Slide Repair Project, NHU-8-010(047)934, PCN 23288
c: Travis Davidsavor and Jed Greenwood, Barr

1 Introduction

The West Fargo Main Avenue Slide Repair project will be constructed to mitigate landslide instability on the north side of Main Avenue near the intersection of Sheyenne Street. The repair will involve driving approximately 100 closed-end pipe piles to a depth of 50 feet. It is anticipated that the pile driving operations will cause vibration levels high enough that they will be perceived by nearby homeowners, but not high enough to cause damage to their homes. Nearby residents have indicated that they have felt vibrations in their homes during previous pile driving projects in the area. Additionally, homeowners on the north side of the river have expressed concerns that the vibrations from construction could result in increased erosion of the riverbank adjacent to their homes.

A Vibration Evaluation Report and Vibration Monitoring Special Provision have been prepared for this project. The Vibration Monitoring Special Provision specifies maximum peak particle velocities adjacent to nearby structures and indicates that the Engineer will conduct vibration monitoring activities during construction.

The purpose of this document is to outline the requirements for the vibration monitoring activities that are required to be completed during construction, which consist of the following:

- 1. Monitoring vibration levels using seismographs,
- 2. Riverbank monitoring,
- 3. Pre and post construction structure condition assessments, and
- 4. Public relations related to pile driving.

NDDOT intends to hire an engineering consultant to perform these tasks. The firm hired to perform these tasks is referred to as the "Monitoring Consultant" in this document. The term "Engineer" in this document refers to the Engineer overseeing construction of the project, which may or may not be the same entity as the "Monitoring Consultant".

2 Monitoring Vibration Levels using Seismographs

It is recommended that a series of seismographs be installed at various offsets from the pile driving operations to monitor vibration levels during construction.

2.1 Seismograph Equipment

Provide seismograph equipment meeting the following specifications:

- 1. Remote installation with a one-month minimum battery life
- 2. Datalogger:
 - a. Digital pre and post processing with a high-resolution A/D convertor
 - b. Signal triggering when a preset trigger level is exceeded
 - c. Minimum 2-minute recording with a minimum 5-second preset
- 3. Triaxial geophone sensors:
 - a. High quality, velocity sensing geophones
 - b. Minimum frequency range: 2 250 Hz, sensitivity ± 2%
 - c. Minimum sample speed: 4096 Hz
 - d. Maximum peak particle velocity: 10 in/sec
 - e. Minimum peak particle velocity: 0.01 in/sec
- 4. Calibration:
 - a. Recently calibrated with certificate, calibrated no more than one-year prior to use on site
 - b. All units are to be within calibration period during data collection
 - c. Internal calibration daily
- 5. Internal data storage:
 - a. SD or Micro SD industrial memory card with a minimum of 1 GB capacity
- 6. Connectivity
 - a. Internal 4G modem
 - b. Data buffered on memory card
 - c. Cloud storage accessible via internet
 - d. Also provide ability to download manually data
- 7. GPS position reporting with time correction
- 8. Unit weather protected for weather conditions typical in North Dakota.

2.2 Proposed Seismograph Locations

The proposed locations of the eight seismographs are provided in Figure 1 (full size figure also attached). Permission will be required from the residents and/or landowners for the installation of the seismographs. While the selected locations are considered important, if the residents do not allow installation, an alternative location will need to be used.

Figure 1 Vibration Monitoring Proposed Seismograph Locations

Approximate seismograph locations are as follows:

Seismograph Approximate Location

- #1 Storage building east of pile installation area
- #2 Residence at 500 1st Ave NW
- #3 Residence at 150 Main Ave W
- #4 Residence at 508 1st Ave NW
- #5 Between residence at 512 and 513 1st Ave NW
- #6 Near intersection of Main Ave W and Morrison St, south of Main Ave
- #7 Residence at 232 1st Ave W
- #8 In Armour Park, adjacent to picnic shelters

While selecting these locations, the intent was to monitor critical structures (the structures closest to the pile driving and thus likely to experience the highest vibration levels) and also to provide a variety of offset distances from the pile driving (a variety of offsets will lead to a more complete data set). It is also important to note that each of these locations will be a different distance from the pile driving depending

on the location of the pile being driven. For instance, seismograph #1 is approximately 75-feet from the east end of the piling, but approximately 600 feet from the west end of the piling.

Seismograph #8 is the furthest from the pile driving and least likely to see significant vibrations. This seismograph could also be used as a "rover" and moved to different locations of interest during construction. For example, if a homeowner reports vibration being felt in their home, the seismograph could be moved to that home.

2.3 Seismograph Installation

Install the seismographs in conformance with the guidance in the ISEE Field Practice Guidelines for Blasting Seismographs 2020 and the manufacturer's recommendations. Install the seismograph in direct contact with the soil adjacent to the structure that is being monitored. Use an installation method that provides adequate coupling between the ground and geophone for the vibration levels anticipated.

Place the seismographs in an area that will not interfere with the area's normal activities (such as grass mowing) and generally in areas away from vehicle traffic. Seismograph #6, however, will be located adjacent to Main Ave, which will receive significant vehicle traffic vibrations. The data from this seismograph will provide a baseline for vehicle traffic in the general vicinity.

2.4 Seismograph Peak Particle Velocity (PPV) Limits

The specified maximum single component peak particle velocity resulting from construction activity is 0.30 in/sec for residential structures and 0.50 in/sec for commercial structures.

2.5 Vibration Monitoring Procedures

Install the seismographs a minimum of seven days prior to pile driving operations beginning. Following the installation of the seismographs and confirmation that they are functioning properly, record and analyze background vibration levels. Investigate and document any excessive background vibration levels. It is likely that seismograph #6, adjacent to Main Ave, will have vibration levels more than the seismograph's trigger level at 0.05 in/sec, which will be acceptable. Review background vibration levels for each seismograph for the following hours: 8:00 am, 12:00 pm, 3:00 pm and 5:00 pm, to get a variety of readings at different traffic levels.

Monitoring the vibration levels for the first pile is critical. Depending on where the first pile is driven, monitor the closest seismograph to both a residential structure and commercial structure throughout the driving operations until the pile reaches its specified depth.

If the Contractor exceeds 80% of the ground vibration limit specified in Section 2.4, for any construction activity, the Contractor will be required to cease that activity and submit to the Engineer in writing within 24 hours a description of the activity being performed and a proposal for corrective action necessary to ensure that the specified limit is not exceeded for future activities.

If the Contractor exceeds the ground vibration limit specified in Section 2.4, for any construction activity, the Engineer will direct that all activities related to those causing vibration be stopped. The Contractor will then be required to submit to the Engineer in writing within 24 hours a description of the activity being performed and a proposal for corrective action necessary to ensure that the specified limit is not exceeded for future activities. In order for the Contractor to proceed with any further vibration-producing activities, the Contractor must obtain written permission from the Engineer.

2.6 Vibration Data Review and Processing

Configure the seismographs such that alerts are automatically sent to the project team via email when a given threshold level is exceeded. The alert should be sent to the Monitoring Consultant, NDDOT, Engineer of Record, and construction phase Engineer. This alert should include the full waveform recording for analysis. When these alerts are received, the Monitoring Consultant will coordinate with the pile driving contractor to attempt to determine the source of the vibration alert (i.e., was the alert caused by vibration from pile driving, or another source, unrelated to construction). Record the time of the alert, the construction activities being performed at the time of the alert, and the suspected source of the vibration (the particular construction activity or another unrelated activity).

In addition to sending automatic alerts when threshold levels are exceeded, configure the seismographs such that they automatically send a summary of vibration recorded at the end of each workday. This will help verify that the seismographs, and associated cellular modems, are functioning properly in the event that alert thresholds were not exceeded during a given workday, as well as providing information on background vibration levels.

2.7 Vibration Monitoring Consultant Experience Requirements

The individual in responsible charge of the vibration monitoring must have at least 3 years of related experience including seismograph installation and vibration data evaluation.

3 North Riverbank Monitoring

In addition to concerns about vibration levels being a nuisance or impacting nearby structures, there is also a concern from residents on the north side of the river that vibrations from pile driving could cause increased erosion along the riverbank that is already severely eroded and has begun to negatively impact some of the homes. To mitigate this concern, it is recommended that the north river bank be monitored during construction.

Monitoring of the north riverbank requires the following activities:

- 1. Inspect and document the condition of the riverbank pre and post construction, and
- 2. Install a series of survey prisms mounted on posts along the riverbank and survey their locations periodically during construction to monitor for movement.

3.1 Pre and Post Construction Riverbank Inspection and Documentation

To help determine if the north riverbank is impacted by construction activities, complete a pre and post construction inspection of the north riverbank. The requirements for this work are:

- For both the pre and post construction inspections, inspect and document the north riverbank condition from the outlet of the box culvert under Main Avenue to the downstream end of the property at 102 5th St. NW.
- For the pre construction inspection, complete the inspection no more than five days before the contractor plans to begin pile driving.
- For the post construction inspection, complete the inspection no more than five days after the contractor finishes pile driving.
- For both inspections:
 - Take a minimum of one photograph of the riverbank every 50 feet along the river.
 - o Take pictures at similar locations and from similar angles for the pre and post inspections.
 - To adequately inspect and document the condition of the riverbank use of a canoe or boat may be necessary.
- Prepare a memo documenting any notable features observed on the riverbank after the pre inspection. Submit the memo and a copy of all digital photographs from the inspection to NDDOT within 3 days following the inspection.
- Prepare a memo documenting any notable features and any observed changes along the riverbank after the post inspection. Submit the memo and a copy of all digital photographs from the inspection to NDDOT within 3 days following the inspection.

3.2 Automated Riverbank Prism Monitoring

Inspect the north riverbank (this will need to happen separately and before the official pre inspection detailed in Section 3.1) and identify areas of potential instability and proposed prism monitoring locations. Provide point monitoring of those features using survey prisms mounted on steel fence posts. Determine the proposed monitoring prism, backsight, and automated total station locations and submit to NDDOT for review 30 days before the contractor plans to begin pile driving. Install the monitoring prisms, backsights, and automated total station(s) at least 21 days before the contractor plans to begin pile driving to allow monitoring of temperature and seasonality effects of the riverbank. Locate components in real space based off survey control used for site construction. Specific requirements for this work are provided below.

3.2.1 Automated Motorized Total Station (AMTS) Monitoring Consultant Responsibilities

- Provide reflective monitoring prisms, fasteners, and extension pipes and plates as needed.
- Determine final location/number of the monitoring prisms, backsights, and automated total station(s).
- Install concrete pedestals consisting of 12-inch HDPE sewer pipe on end for mounting the AMTS as necessary on the south side of the river. Additional concrete pedestals and total stations may

be necessary depending on site conditions. The pedestal shall extend at least 8 feet above ground surface and be embedded 6 feet into the ground.

- Provide, install, and operate the monitoring system.
- Perform tree trimming or removal of vegetation within the site lines of the robotic total station to each monitoring prism.
- Coordinate utility locates prior to instrumentation/pedestal installations.
- Utilize an automated, robotic total station, specifically designed for high precision monitoring applications with a displacement accuracy less than ±0.05 inch.
- Take automatic readings hourly to establish an initial baseline for pre construction monitoring. If NDDOT or the Monitoring Consultant deems necessary, provide ability to take readings more frequently.
- After completing pre-construction monitoring, in consultation with NDDOT, establish a threshold limit for typical maximum movement for the prisms. If movement above this threshold is observed, notify NDDOT, inspect the movement location, and document the movement with photos and provide to NDDOT.
- Provide a minimum of three reference prisms used to locate the monitoring instrument to allow for stable instrument readings.
- Measure the reference prisms prior to each set of monitoring readings hourly.
- Monitor the prism readings hourly:
 - o 2 weeks before pile driving begins,
 - o During pile driving construction, and
 - 2 weeks after pile driving is complete.
- Remove remaining equipment, including the AMTS concrete pedestal(s) at the completion of the project and restore the area to pre construction conditions.

3.2.2 AMTS Monitoring Consultant Experience Requirements

The individual in responsible charge of the AMTS monitoring must have at least 3 years of related experience including AMTS system installation, operation, and evaluation of AMTS readings.

4 Pre and Post Construction Structure Condition Assessments

Offer pre and post construction condition assessment surveys to building owners within 400 feet of the pile driving footprint and as generally listed below:

- 1. 500 1st Ave NW (residence)
- 2. 502 1st Ave NW (residence)
- 3. 503 1st Ave NW (residence)
- 4. 504 1st Ave NW (residence)
- 5. 505 1st Ave NW (residence)

- 6. 506 1st Ave NW (residence)
- 7. 507 1st Ave NW (residence)
- 8. 508 1st Ave NW (residence)
- 9. 509 1st Ave NW (residence)
- 10. 510 1st Ave NW (residence)
- 11. 512 1st Ave NW (residence)
- 12. 514 1st Ave NW (residence)
- 13. 101 5th St NW (residence)
- 14. 102 5th St NW (residence)
- 15. 104 5th St NW (residence)
- 16. 32 Park Drive (residence)
- 17. 130 Park Drive (residence)
- 18. 132 Park Drive (residence)
- 19. 138 Park Drive (residence)
- 20. 144 Park Drive (residence)
- 21. 150 Park Drive (residence)
- 22. 160 Main Ave W (two storage unit buildings)
- 23. 219 Main Ave W (business)
- 24. 227 Main Ave W (church)
- 25. 239 Main Ave W (business)
- 26. 313 Main Ave W (business)
- 27. 405 Main Ave W (business)
- 28. 413 Main Ave W (business)
- 29. 24 Sheyenne St (business)
- 30. 25 Sheyenne St (business)

31. 29 Sheyenne St (business)

Obtain written permission from the property owners who accept the offer to perform the condition surveys, prior to performing the surveys. Perform pre construction condition assessment surveys for the buildings whose owners accept the offer to perform the condition survey. The survey will include documentation of interior sub-grade and above grade accessible walls, ceilings, floors, rooms, and the visible exterior as viewed from the grade level. It will detail (by engineering sketches, video recordings, photographs, and/or notes) the existing structural and cosmetic conditions of the property. Prepare a pre construction condition assessment report for each property inspected. Provide a copy of the report to NDDOT and to the Contractor. Perform the pre construction condition assessment a minimum of 5 days and maximum of 14 days before the contractor plans to begin pile driving.

Install crack displacement monitoring gauges across any significant existing cracks within the buildings to help verify any additional building distress, if it develops. Read and record the gauge measurements prior to commencement of vibration-producing activities, during vibration-producing activities, and after vibration-producing activities. Provide results of crack gauge readings to NDDOT and to the Contractor.

Perform a post construction condition assessment survey for all structures that accepted a pre construction condition assessment survey to establish any variations in the building condition during construction. Prepare a post construction condition assessment report for each property inspected. Provide a copy of the report to NDDOT and to the Contractor. Perform the post construction condition assessment a maximum of 10 days after the contractor finishes driving pile. Remove crack monitoring gauges without causing damage to the structures or finishes.

Include the following information in the pre and post construction condition assessment reports:

- Date(s) of survey
- Property address
- Property owner name and phone number
- Structure use, occupancy, or purpose
- Approximate age of structure
- Persons present during the survey
- Existing documentation discovered through research or made available
- Access methods and equipment used
- High-resolution digital photographs, clearly identified in a detailed log and keyed to structure plans and/or elevations
- Annotated sketches and/or figures
- Record defects and distress on photographs, drawings, or similarly descriptive graphics
- Description of structural system(s)
- Description of exterior wall or construction materials
- Description of interior finishes or construction materials
- Foundation type and depth
- Subsurface conditions
- Obstructions limiting the survey

4.1 Requirements for Individual Performing Condition Assessment Surveys

The individual performing the pre and post construction condition assessment surveys must:

- 1. Be a Professional Engineer registered in the state of North Dakota,
- 2. Have at least 3 years of related experience, and
- 3. Have performed at least 25 previous condition assessment surveys of structures.

5 Public Relations Related to Pile Driving

This project has a high level of public interest from adjacent property owners and local officials. The following public relations components are recommended:

5.1 Public Meeting

Host a public meeting at Armour Park, or an alternative indoor location near the project site furnished by Monitoring Consultant in the event of inclement weather, to inform the public about the project and construction vibrations in general. Hold the meeting on a weekday evening approximately 6 weeks before the contractor plans to begin pile driving.

5.2 Landowner Notifications

5.2.1 Condition Assessment Offer and Public Meeting Invitation

Prepare a notification to mail to all landowners within 400 feet of the pile driving location. This notification should provide information about the project, offer the landowner a pre construction structure condition assessment (as discussed in Section 4 of this document), and invite the landowner to the public meeting (as discussed in section 5.1 of this document).

Prior to sending out the notification, submit a draft to the NDDOT and the City for review and concurrence. Allow two weeks for review of the document. Monitoring Consultant is responsible for mailing the notification 15 to 21 days prior to the public meeting. Addresses for landowners of the properties within 400 feet of the pile driving location are attached to this document in Table 1.

5.2.2 Public Meeting Notification

Prepare a notification to mail to all landowners beyond 400 feet but within 1000 feet of the pile driving location. This notification should provide information about the project and notify the landowner of the public meeting. If the landowner address of a given property is different than the physical address of the property, also distribute this notification to the physical address (i.e. to the tenant) for all properties within 1000 feet of the pile driving location.

Prior to sending out the notification, submit a draft to the NDDOT and the City for review and concurrence. Allow two weeks for review of the document. Monitoring Consultant is responsible for mailing the notification 15 to 21 days prior to the public meeting. Addresses for landowners of the properties beyond 400 feet but within 1000 feet of the pile driving location are attached to this document in Table 2. Provide final notification to the City 3 days prior to mailing so that the City can post the information on their social media outlets.

To:Jared Loegering and Colter Schwagler, NDDOTFrom:Stan Vitton, Aaron Grosser, and Matt Peterson, BarrSubject:Vibration Monitoring PlanDate:October 11, 2023Page:11

5.2.3 Pile Driving Starting Notification

Prepare a notification to distribute to all landowners and tenants (if different from landowner) within 400 feet of the pile driving footprint. In the notification, include anticipated dates pile driving will be completed, time of day pile driving will begin and end, and contact information for the individual designated to receive public comments. Distribute the mailing at least 7 days but not more than 14 days prior to beginning pile driving.

Prior to sending out the mailing, submit a draft to the NDDOT and the City for review and concurrence. Allow two weeks for review of the document. Monitoring Consultant is responsible for distributing the mailing.

5.3 Landowner Agreements

As part of this monitoring program seismographs and monitoring prisms (instrumentation) will be placed on private property. For each property that is proposed to have instrumentation on it, prepare an SFN 50882 "Agreement for Entry and Construction (No Compensation)" form. Discuss the installation of the instrumentation with the landowner in person, and present the form to the landowner for their consideration. Obtain a signature on the form from the landowner, finalize the form, and submit to NDDOT for each affected property. If a landowner refuses to allow the instrumentation to be installed on their property, consult with NDDOT to select an alternate property, and obtain a signed form for that property.

5.4 Public Comments

Provide one point person to receive all public comments related to the project. Provide ability to receive comments via phone, text, or email. Work with commenter and contractor to resolve all issues in a timely manner.

6 Schedule

The schedule requirements for the tasks outlined in this memorandum are summarized in the table on the following page.

Table 6-1 Schedule Requirements

Task	Timing
Public Meeting Notification	15-21 days prior to public meeting
Hold Public Meeting	Approximately 6 weeks prior to pile driving beginning
Submit Proposed AMTS System Locations to NDDOT for review	Minimum 30 days prior to pile driving beginning
Landowner Agreements	Prior to installing instrumentation
Install AMTS System	Minimum 21 days prior to pile driving beginning
Begin AMTS System Readings	Minimum 14 days prior to pile driving beginning
Perform Pre Construction Structure Condition Assessments	Minimum 5 days and maximum 14 days prior to pile driving beginning
Install Seismographs	Minimum 7 days prior to pile driving beginning
Landowner Notification Prior to Pile Driving	Minimum 7 days and maximum 14 days prior to pile driving beginning
Perform Riverbank Pre Construction Inspection	Maximum 5 days prior to pile driving beginning
Complete Riverbank Post Construction Inspection	Maximum 5 days after pile driving ends
Perform Post Construction Structure Condition Assessments	Maximum 10 days after pile driving ends
End AMTS System Readings	Minimum 14 days after to pile driving ends
